

INSTRUCTIONS:

Create the elements of this structure *in the normal flow*.

For the HTML, you can use borders, colors, and placeholder text to identify them as you desire.

For the CSS, you can get started with the selectors, such as **#topArea**, **header**, **#logo**, **nav** and so on. However, don't worry about CSS layout (declarations) yet.

This is not to be turned in, but you must do it at home. If you don't even try to do it, you won't be able to keep up.

PS. *Believe it or not, there is nothing really new to learn here. If you want to try the entire emulation on your own, just use a different stylesheet for your practice.*
