Hi Designers,

I was so looking forward to walking through the free vector websites such as Vecteezy and Freevector with you. It is quite exciting to be able to use really clean parts of vectors and modifying them to come up with your own design.

For instance, I used 2 different vectors and added my own take to come up with a family logo and we use it throughout the family.

**The above is just an example.
Your assignment is below:**

I want you to do a good job, but will not put a lot of restrictions on the assignment so that you'll have freedom to create:

1. Explore images at <https://www.vecteezy.com> or <https://www.freevector.com>.
2. Then download and unzip one of the free ones.
3. Use part(s) of design(s) to create your own design such as a logo or anything else that you're interested in.
4. Try hard to personalize it with some of *your own drawings, embellishments, or text*. Your design should have no more than about 30% of their vectors.

Submit to OAKS "Offshoot from free vectors" by Wednesday 4/26.
