

ROADMAP TO EACH MODULE:

There will be a module for each week in the semester. Each module begins with an overview, which provides an overall idea of what is covered in each module. The modules will have four subsections, as explained below.

Planning and Questions

These are administrative and other new tools needed to get through the module. In addition to general administrative tools, I will try to include anything that you need to be alerted to within the module.

Lectures and Reading

All of the material that you are required to read, watch, or listen to are listed here. The optional material will generally be under "Additional Resources".

Assignments and Deliverables

Consists of work that you are responsible for submitting in some way. This includes assignments, discussions, quizzes/tests, group work, and projects. I will specify which category of grades each assignment falls under.

Additional Resources

Normally these will be helpful resources that are connected with the module. They are optional.
